

## The BAP technique (BAP = Bio Aesthetic Points)

This technique makes it possible to flood the entire face with PROFHILO<sup>®</sup> with only 5 small injections per half of the face using the finest cannula (29G TW).

The dosed amount at the particularly receptive BAP points allows the two-dimensional diffusion of PROFHILO<sup>®</sup> in the subcutis and results in a natural and lasting fresh appearance. PROFHILO<sup>®</sup> can be combined with all current aesthetic procedures (fillers and Botox).

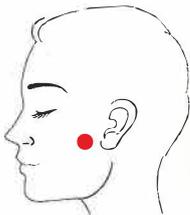

# Determination BAP

- 1 Zygomatic protrusion**  
Minimum distance of 2 cm to the distal corner of the eye

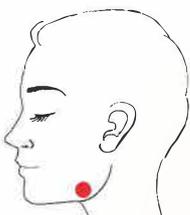

- 2 Nasale Basis**  
At the intersection of a vertical line from the pupil and a horizontal line from the nostril to the tragus

- 3 Tragus**  
At least 1 cm in front of the tragus

- 4 Chin**  
1.5 cm from the intersection of a vertical line from the center of the chin and a horizontal line intersecting the vertical line in the upper third

- 5 Jaw angle**  
1 cm above the jaw angle

### 5 BAP Injection points per half of the face

0.2 ml per bolus into the subcutis

### Only 2 treatments

one month apart are usually sufficient.

Depending on the condition of the skin, a third application follows after two months.

For lasting results, 2 treatment cycles per year are recommended.

### Please note!

The Bio Aesthetic Point (BAP) indications shown must be adapted to the individual morphology of each patient.
