

The 10-point BAP technique for bio-remodelling on the neck

This technique makes it possible to flood the entire neck with PROFHILO® with only 10 small injections using the finest needle (29G TW).

The dosed amount of 0.2 ml per bolus in the subcutis results in a natural and lasting fresh appearance. The subsequent massage supports the two-dimensional diffusion of PROFHILO®.

10 injection points

0.2 ml per bolus into the subcutis

Only 2 treatments

with an interval of one month are usually sufficient.

Depending on the condition of the skin, a third application follows after two months. For lasting results, 2 treatment cycles per year are recommended.

Please note!

The Bio Aesthetic Point (BAP) information shown must be adapted to the individual morphology of each patient.
